

CASE STUDY

A1 Technologies Ltd

The
Diploma
IN ENGINEERING

“The Diploma in Engineering helps students to develop the generic skills that all employers require and value.”

Martin Stevens
CEO
A1 Technologies Ltd

Developing young people's potential with the **Diploma in Engineering**

Giving young people the skills they need

Martin Stevens, CEO of A1 Technologies and Diploma Champion, strongly supports the Diploma in Engineering and backs the call for more work-based learning for young people. As an employer he wants to see more relevant up-to-date education, with better skills development in young people within the UK. The Diploma will provide employers with a work-ready pool of candidates to recruit from and will help boost the UK economy.

A1 Technologies offer schools revolutionary and low cost technology in 3D design and printing and are in regular contact with teachers, offering advice and information on best practice.

Supporting the Diploma in Engineering

A1 Technologies actively shows its support of the Diploma by carrying out various activities which will benefit employers, education, learners and the UK economy.

These include:

- Attending a number of large events talking to parents, teachers and young people about what the diploma has to offer.
- Lectures to various audiences, including students, teachers and employers based in Brighton and London, about the benefits of the Diploma to individuals and the UK economy.

“I believe that more and more young people will show an interest in studying engineering and the Diploma is an exciting, hands-on qualification which will produce the best engineers of the future.”

Martin Stevens
CEO
A1 Technologies Ltd

- Providing students with business insight through work-experience and practical problem solving tasks.
- Helping young employees with the theoretical and functional skills that employers seek including: creative thinking, problem solving, communication, independent and team working.

“As a company bringing cutting edge technologies to everyone, we need highly qualified engineers and technicians. The Diploma in Engineering will play a key part in helping this to happen. The Diplomas in general help students to develop the generic skills that all employers require and value,” says Martin.

Opportunities for employers

By getting involved in the diploma gives employers the opportunity to:

- Work jointly with education providers to ensure the qualification meets the needs of learners, employers and education.
- Influence education providers on how the diploma is delivered.
- Work alongside learners to complete projects which deliver real business outcomes.
- Inspire students to follow a career in engineering in order to produce the best future workforce.
- Help to prepare students with the practical and theoretical skills they need for employment.
- Give talks and lectures to add context to young people’s learning using real business scenarios.
- Provide some of the resources, equipment and premises required for teaching.
- Offer work-experience for students and work shadowing for teachers.
